The following is a proposed examiner's amendment to overcome the reference of Fagot. The examiner believes in figure 6 the insert is juxtaposed against the back surface of the front face to provide support for the entire front face since the entire front face is an integral unit and the insert contacts the back surface. However it would not be obvious to place the insert against the entire back surface of the front face inside the cavity. Please review this amendment and call back to agree or suggest other changes. Thank you.

Sincerely,  Stephen Blau (571-272-4406)

The application has been amended as follows:

- a. In claim 1 line 6 before the words "back surface" the word -- entire -- has been added.
- b. In claim 1 line 7 before the words "to provide support" the words -- inside the cavity -- have been added.
- c. In claim 17 line 9 after the words "front face" the words -- inside the cavity -- have been added.
- d. In claim 29 line 6 the words "front face" have been replaced by the words -- entire back surface of the front face inside the cavity --.
